

Ch 3 In class Activity

Q1

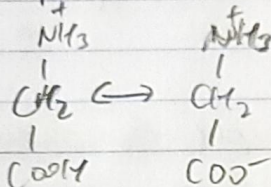

Q2

Q4

pH 2.34

pH 8.97

pH 9.60

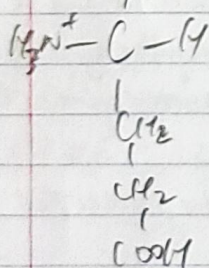

pH 11.0

Q5

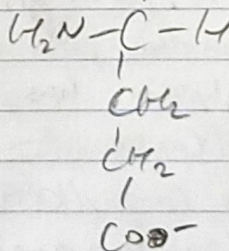

pH 1

pH 7.4

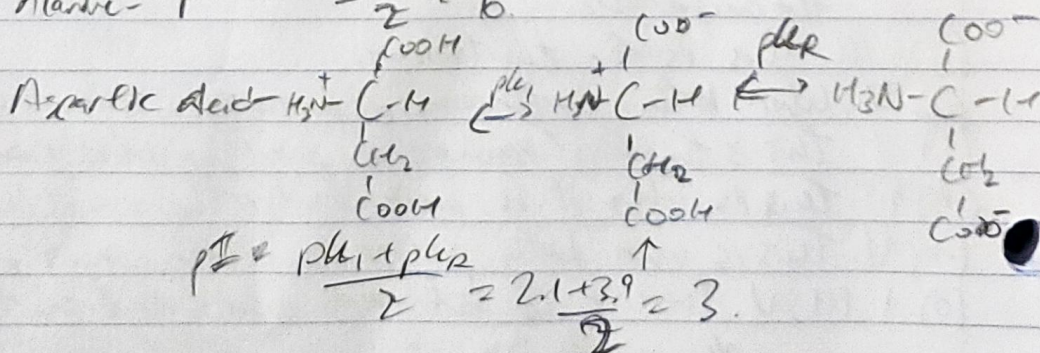

pH 11

Q6

Alanine - $\text{PI} = \frac{2.34 + 9.7}{2} = 6$

Q7. B, a net positive charge.

Q8. 2 Gly, 1 Ceu, 1 Phe, 1 Tyr

Tyr - Gly - Gly - Phe - Ceu

Q9. (a) I. At the lowest pH, the amino acid will be in the most protonated form.

(b) II. The glycine is half converted from the +1 fully protonated form to the zwitterion, so the charge is 0.5.

(c) IV. At this point, half the glycines have been converted to the completely deprotonated form, which deprotonates the amino group.

(d) II. This is the pH_1 , which is the pK_a of the carboxyl group.

(e) IV. This is the pH_2 , which is the pK_a of the amino group.

(f) II and IV, where glycine acts as both acid and base around the pH of the carboxyl and amino groups.

(g) III. Glycine has been completely converted to the zwitterion.

(h) III. The carboxylic acid has been completely converted to form the zwitterion.

(i) V. Both hydrogens have been deprotonated off the amino acid.

(j) III. This is the zwitterion.

(k) V. When both protons are deprotonated, the charge is -1.

(l) II. This is the first equivalence point, by definition.

(m) III. This is when it is predominantly the zwitterion.

(n) V. This is when both protons have been completely deprotonated.

(o) I, III, V. There is no buffering power far from the pK_a and pH_2 .

Q10. a. $\frac{110000}{110} \approx 1000$. This protein has 1000 amino acids.

b. $\text{Lys} - \text{C}_6\text{H}_{11}\text{N}_2\text{O}_2 - 146.190 \text{ g/mol}$

$$\frac{146.190 \times 10}{10.5\%} = 13922 \text{ g/mol} \approx \text{Molecular mass of ribonuclease.}$$

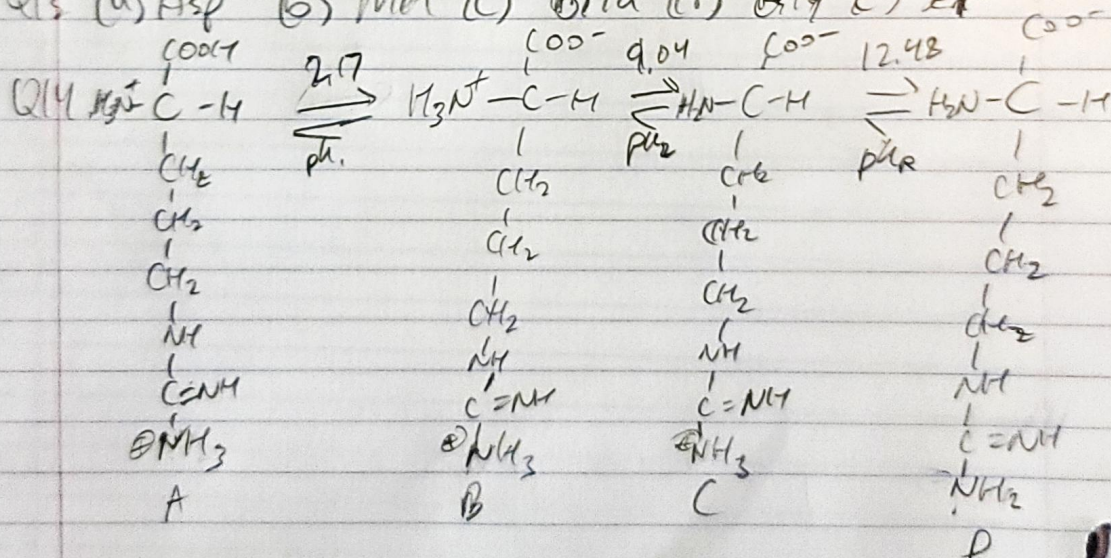

- Q11. (a) size-exclusion chromatography
(b) ion-exchange
(c) separation by affinity to PNA.

Q12. 2Ala, 1Leu, 1Phe, 1Tyr, 1Trp.

Tyr-Phe-Ala-Ala-Trp-Leu

(b) Tyr-Ala-Ala-Trp-Phe-Leu (also possible)

Q13. (a) Asp (b) Met (c) Glu (d) Gly (e) Ser

(b) 1: A 9.04: B < C 14: D
(c) (D) $\frac{9.04 + 12.48}{2} = 10.76$

Q15 a.

1. $4000000 / 20000 = 200$
2. $3000000 / 5000 = 600$
3. $1000000 / 4000 = 250$
4. $800000 / 200 = 4000$
5. $750000 / 80 = 15000$
6. $675000 / 45 = 15000$

b. Ion-exchange chromatography was the most effective.

c. precipitation (pt) was the least effective.

d. An indication is no improvement after doing size-exclusion chromatography. You can run an SPS PAGE to check the purity of the substance and ensure only one band shows up.
